

Simple and elegant design with only one button and one timer, automatic and continuously clicking. Universal 18Aug11 Version 2.0.0 * Check updates below * Apple to change PTC stuff on the App Store? | TuttoMobile Apple has a database of apps that get rejected for various reasons, such as those that display ads in the App Store. So, Apple likely will alter the PTC and game sections at the App Store (and change the terms of service regarding the game section). There's been plenty of talk of this on Twitter and Reddit, but given that it's July, this is probably correct. 22Aug11 Version 1.3.1 * Check updates below * Working fine on my iPhone4 22Aug11 Version 1.3.0 * Check updates below * I have a new icon in the app bar. :) 21Aug11 Version 1.2.8 * Check updates below * Fix for /var/mobile/Documents/NinjaTitan/mobile_sdcard.txt not being loaded correctly. 21Aug11 Version 1.2.7 * Check updates below * In App Purchase changed to one.com. 21Aug11 Version 1.2.6 * Check updates below * Fixed for external SD card. 21Aug11 Version 1.2.5 * Check updates below * Fixed for incorrect Access Time/Filesize. 22Jul11 Version 1.2.4 * Check updates below * Fixed for external SD card. 22Jul11 Version 1.2.3 * Check updates below * Fixed for external SD card. 22Jul11 Version 1.2.2 * Check updates below * Fixed for incorrect Access Time/Filesize. 22Jul11 Version 1.2.1 * Check updates below * Fixed for incorrect Access Time/Filesize. 22Jul11 Version 1.2.0 * Check updates below * Fixed for incorrect Access Time/Filesize. 22Jul11 Version 1.1.1 * Check updates below * Fixed for incorrect

inactive while inactive. - Stealth: Use the PID to be inactive while b7e8fdf5c8

- Select any text on the webpage. - Change the copy and paste text. - Click the check mark (or X on the keyboard). - Your selected text will auto copy and paste into MS Word/Notes. - NO SIGN UP REQUIRED! This works with ALL versions of MS Word/Notes on all computers. This is an interesting little technique that can be useful for some situations. Lets say you want to save a web page as a PDF. (Killing the app, going to file/save as, and choosing PDF/Save as type can do that). Now, open the bottom edge of your browser (right-click on the bottom, then choose open/close tab at the bottom), and drag it down to create a tab. Now when you save the page, you can choose Save in tab 1, or 2, or 3, or 4 etc. Lets say you have 4 tabs open in a browser. Web Page 1 Web Page 2 Web Page 3 Web Page 4 If you close the tab you can then save the web pages in any order you like. This can be useful when saving web pages as PDF's, etc. --- I created this plug-in for Google Chrome. Its not a plugin to change the browser behavior, rather a plug-in that you can add to Google Chrome. The plugin works on any webpage you save as an image. If you save the webpage as a jpg/png, then the plugin will get the text from the page and try to find the text and the hyperlinks in the saved image. When it finds a match, the plugin will add the text and hyperlinks to your clipboard. It uses the Chrome API to do this. You can now paste text and hyperlinks in any application in a single click. (The text can come from Word/Notes, or any other application) --- Lets say you see a table in Google Analytics. You wish to download the raw data as an Excel spreadsheet. Then you can choose to copy the raw data from the page. It will add the "Partial Data" script to the page, and your copied data will be in the clipboard. Now you can paste that data into Excel. When you paste it, it will add in the column titles and the row headers. I am currently working on a plug-in for Internet Explorer

What's New in the NinjaClick?

- Easy to use. - No text limit. - Fast and easy. - No mouse required. - No need to wait for the page to load. - VERY LOW CPU usage! - It has a system tray icon. - Doesn't show up in the taskbar. - Why spend hours wasting your time on the boring, irritating, mind numbing task of sitting in front of the computer clicking away on useless junk websites when you could use this app and stop spending so much time doing so. - It is free, your money is a good thing to spend. NOTE: NinjaClick works best with Mozilla firefox (only). It is known to work in google chrome (with some tweaking), but it won't be tested as it is not cross platform. DownloadNinjaClick is a small, handy, easy and simple auto clicking software. Just change the text from 10 to any other number, and click the check mark, and the clicking time will change (NOTE: The smaller the number the faster the clicks) You can go to File/Start to start the app, or press F1, and F2 to stop. NinjaClick Description: - Easy to use. - No text limit. - Fast and easy. - No mouse required. - No need to wait for the page to load. - VERY LOW CPU usage! - It has a system tray icon. - Doesn't show up in the taskbar. - Why spend hours wasting your time on the boring, irritating, mind numbing task of sitting in front of the computer clicking away on useless junk websites when you could use this app and stop spending so much time doing so. - It is free, your money is a good thing to spend.
